PROFILE

I am currently pursuing a **Master of Computer Applications (MCA)** with an interest in **Artificial Intelligence and Machine Learning**. I have **hands-on experience in Web and Application Development**. I am passionate about exploring emerging technologies and collaborating with dynamic teams to create innovative and impactful solutions.

EDUCATION

Master of Computer Application JECRC University	2024 – 2026 Jaipur
Bachelor of Computer Application BIT Mesra, Jaipur Campus	2021 – 2024 Jaipur

EXPERIENCE

Jaipur Rugs • Deployed EcoTrace : Full-stack carbon footprint platform (Next.js, MongoDB, TypeScript) serving real users with AI-powered sustainability insights • Built OpenCV image processing pipeline for automated carpet perspective correction: ~90% efficiency gain (180s → 10-15s per image) using GrabCut segmentation and homography transformation • Optimized backend workflows with Pandas/NumPy for efficient data computation and MongoDB schema design	02/2026 – 06/2026
UBGOT Software Pvt. Ltd. • Optimized website responsiveness for client test pages to ensure consistent user experience across multiple devices and screen sizes. • Learned backend development and assisted in creating REST APIs and integrating frontend with backend for specific sections.	12/2022 – 02/2023

PROJECTS

EcoTrace - Carbon Footprint Platform 🔗 , <i>Next.js, TypeScript, MongoDB, LLM API</i> • Developed a Full-stack web application to calculate carbon footprints based on user inputs across Energy, Transport, Food, and Waste categories. • Integrated LLM API for AI-driven sustainability insights and PDF report generation. • Implemented JWT-based authentication with role-based access (User/Admin) and secured password hashing (bcrypt). • Built RESTful APIs with Next.js and deployed on Vercel with MongoDB ODM (Mongoose).
Carpet Image Perspective Correction & Automation Tool , <i>Python, OpenCV, NumPy</i> • Developed an image processing pipeline to automatically detect, isolate, and transform carpet images into standardized top-view (headshot-style) outputs. • Implemented GrabCut algorithm with custom mask initialization for automated foreground extraction and object segmentation • Applied contour detection and homography transformation for perspective warping into standardized top-view outputs • Achieved ~90% efficiency improvement: 3-4 minutes (manual Photoshop) reduced to 10-15 seconds per image

TECHNICAL SKILLS

Languages Python	Frameworks & Libraries Pandas Numpy React.js Next.js Node.js Tailwind CSS TypeScript OpenCV FastAPI
Tools and Platforms Git GitHub VS Code	Database MongoDB PostgreSQL

SOFT SKILLS

- Problem-Solving
- Positive Attitude
- Analytical Thinking

Certificates

Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate
